Excellence in offshore personnel safety

## Tangle Resistant Tag Lines

The tag line that comes with your X-904 is tangle resistant and is an additional safety feature that we recommend for personnel transfer devices.

This product is recommended for all slung loads as plain rope tag lines have a much stronger possibility of fouling, wrapping on a railing or catching on a pinch point.

Our Tangle Resistant tag lines are designed to resist fouling, wrapping or catching on obstruction on the deck.

They also have a better gripping surface than a regular rope and will last much longer.

These ropes are horizontally wrapped and then dipped in polyurethane to protect from wear and UV degradation. The most common lengths are 15 and 20 feet but can be made to any length you prefer.

Please give your Billy Pugh Co. distributor a call for pricing information.
